Dear SPCSA and board members,

I love Doral Academy because of the school's education and discipline for the children. What they learn benefits how they think and how they problem solve with mathematics, robotics, HOSA. These experiences help the students and children have necessary skills for their lifestyle in the future as well as having historical trips, locations. These locations are landmarks such as Philadelphia and other places with landmarks that have history of the United States.

Doral Academy, helps students from Kindergarten to eight grade, understand and improve on their skills in every subject as well as understanding. These improvements can lead to higher levels in subjects. Students are allowed to ask for a tutor, gain help, and ask questions after the parts of the lesson to understand the subject to more of an extent.

The teachers are nice, kind to the students, willing to help the students for what they need as well as pushing the students with their growth with challenges, adjusting the challenges to the student or having them challenge themselves with the situation and problem to grow their brains.

Doral has been incrementing the eight habits towards the students for them to practice. These habits will lead the student to be kind, caring, show leadership, and do what the student needs to do before they're told to do so. These habits can be beneficial for the student's future career or lifestyle. These habits and education have impacted the student's lives because they will be ahead of others in their learning, the challenges will be harder and higher as they are in learning for their future careers and to be a better human being than most.

- Johnathan Salazar-Wade
